

SIECUS

Sexuality Information and Education
Council of the United States

State Profiles **FISCAL YEAR 2018**

The complete FY 2018 State Profiles comprise individual state-specific documents along with four other accompanying documents. The Executive Summary details the current state of sex education across the country, highlighting trends observed over the past few decades. Additionally, it is critical to examine the information from each state within the larger context of the laws and federal funding streams across the country. Please reference the following documents to inform and contextualize broader sex education trends:

- [Executive Summary](#)
- [Federal Funding Overview](#) – compared to [Louisiana's federal funding](#)
- [Sex/Sexuality and human immunodeficiency virus \(HIV\) and other sexually transmitted infections \(STIs\) Education Laws by State](#) – compared to [Louisiana's education laws](#)
- [Descriptions of Curricula and Programs across the United States.](#)

LOUISIANA

For the last 15 years, SIECUS has released the SIECUS State Profiles to provide an overview of federally funded adolescent sexual health promotion and abstinence-only-until-marriage (AOUM) programs in the United States. Indeed, the SIECUS State Profiles' annual reporting provides invaluable insight into 15 years' worth of data documenting how funds for these programs are used and implemented in every state. Prior to this year, SIECUS has worked with every federal administration – Democrat and Republican – to collect and report this data.

Unfortunately, the 2018 SIECUS State Profiles do not include this standard level of information that readers have come to expect. The Trump administration has repeatedly ignored requests for information detailing federal funds issued through the Department of Health and Human Services' (HHS) Office of Adolescent Health (OAH) and Federal Youth Service Bureau (FYSB). In fact, the 2018 SIECUS State Profiles were delayed in publication because SIECUS staff engaged in repeated, but ultimately futile, good-faith efforts to work with these agencies under the Trump administration to obtain this expected data.

The lack of information provided in this year's State Profiles is just one more example of the Trump administration's lack of transparency, willingness to ignore evidence and research, and disregard for Congressional intent of Obama-era federal programs—particularly those designed to ensure the sexual health and well-being of young people. In place of the data that readers have come to expect, this report will instead highlight some of the adverse, and potentially unlawful, actions that these agencies under the Trump administration have taken to subvert the commitment to comprehensive sexual health information that this country has come to expect.

While severely disappointing, this omission of information reinforces the need to broadcast this well-documented truth: AOUM programs (now being called “Sexual Risk Avoidance”) are ineffective.¹

Furthermore, despite the best efforts of agencies under the Trump administration to obscure their illegitimate intent to misuse public funding for sex education, SIECUS will continue to hold this

administration accountable, to seek full transparency in reporting; push Congress to assert its oversight authority; and ensure that policymakers and the public continue to receive accurate, up-to-date information needed to inform appropriate and effective use of public resources to advance the health and well-being of our nation's youth.

SEXUALITY EDUCATION LAW AND POLICY

STATE LAW

Louisiana statute does not require schools to offer sex education, but [Louisiana Revised Statute §17:24.4\(E\)](#) states that “the State Board of Elementary and Secondary Education ... shall develop and establish statewide curriculum standards for required subjects to be taught in the public elementary and secondary schools of [the] state.”² Starting in the 2014-2015 school year, all incoming 9th graders are required to take 1/2 credit of health education.³ Under this authority, the Board of Elementary and Secondary Education promulgated [Part LIX. Bulletin 103](#) to describe the state's health education content standards. From grades 7–12, students learn about sexual abstinence and sexual risk behaviors; in grades 4 and 7–12, students receive human immunodeficiency virus (HIV)/acquired immunodeficiency syndrome (AIDS) and other sexually transmitted disease (STD) education.⁴

[Louisiana Revised Statute §§17:281](#) mandates that sex education cannot be offered in grades K–6, except in Orleans Parish, which may offer sex education in grade 3 and above. If a student is parenting or pregnant, schools must provide this education “regardless of the student's grade level.”⁵ The education must be integrated into “an existing course of study such as biology, science, physical hygiene, or physical education.”⁶ It cannot include “religious beliefs, practices in human sexuality, nor the subjective moral and ethical judgments of the instructor or other persons. Students shall not be tested, quizzed, or surveyed about their personal or family beliefs or practices in sex, morality, or religion.”⁷

Classes may not include “any sexually explicit materials depicting male or female homosexual activity.”⁸ They also may not in “any way counsel or advocate abortion.”⁹ In addition, this education must emphasize that:

- a. Abstinence from sexual activity outside of marriage is the expected standard for all school-age children;
- b. Abstinence from sexual activity is a way to avoid unwanted pregnancy, STDs, including AIDS, and other associated health problems;
- c. Each student has the power to control personal behavior and to encourage students to base action on reasoning, self-esteem, and respect for others.¹⁰

[Louisiana Revised Statute §§17:279](#) requires that all public high schools offering home-economics classes must also provide “parenthood education” and include the following topics about family living and community relationships: the consequences of the lack of adequate prenatal care, home management, and the responsibilities of parenthood. In addition, [Louisiana Revised Statutes Annotated §§ 17:263](#) requires that adoption awareness be included in any health education or appropriate class. This includes instruction on “the benefits of adoption for families wishing to add a child, for potential adoptees, and for persons who are pregnant or who have a child for whom they are unable to care.”¹¹

Parents or guardians may remove their children from sex education classes. [This is referred to as an “opt-out” policy.](#)

STATE STANDARDS

Louisiana's [Health Education Handbook](#) outlines expectations that should be mastered by the end of each grade level and defines sexual health as:

“[T]he area of health education encompassing a broad scope of concepts and skills, including acquiring information about sexual development, reproductive health, interpersonal relationships, body image, and gender roles; recognizing habits that protect female and male reproductive health; and learning about pregnancy, childbirth, and the development of infants and children. It also includes skill development in areas such as communication, decision-making, refusal techniques, and goal-setting. Sexual health topics are grounded in the premise that sexuality is a natural, ongoing process that begins in infancy and continues through life.”¹²

It does, however, delineate abstinence as the “safest, most effective risk avoidance method of protection from HIV, STDs/[sexually transmitted infections] (STIs), and pregnancy.”¹³

Furthermore, according to the [Louisiana Handbook for School Administrators- Bulletin 741](#), students must be taught “the principal modes by which communicable diseases, including, but not limited to, HIV infection, are spread and the best methods for the restriction and prevention of these diseases.”¹⁴ Schools are prohibited from distributing any “contraceptive or abortifacient drug, device, or other similar product.”¹⁵

STATE LEGISLATIVE SESSION ACTIVITY

In 2018, Louisiana enacted [Act 369](#), requiring schools to provide parents with information regarding “the public health risks and harms associated with pornography,” including “the dangers of sexually charged cyberbullying,” as well as “the addictive and destructive nature of pornographic and illicit materials.”

SIECUS tracks all state legislative session activity in our state legislative reports. For more information on bills related to school-based sex education that were introduced or passed by May 31, 2018, please see the most recent analysis of state legislative activity, [SIECUS' 2018 Sex Ed State Legislative Mid-Year Report](#).

YOUTH SEXUAL HEALTH DATA

Young people are more than their health behaviors and outcomes. For those working to support the sexual health and well-being of young people, it is important to utilize available data in a manner that tracks our progress and pushes policies forward while respecting and supporting the dignity of all young lives.

While data can be a powerful tool to demonstrate the sex education and sexual health care needs of young people, it is important to be mindful that these behaviors and outcomes are impacted by systemic inequities present in our society that affect an individual's sexual health and well-being. That is, the context in which a young person's health behavior and decision-making happens is not reflected in individual data points. Notably, one example demonstrating such inequities are the limitations as to how and what data are currently collected; please be mindful of populations who may not be included in surveys or who may be misrepresented by the data. The data categories and any associated language are taken directly from the respective surveys and are not a representation of SIECUS' positions or values. For more information regarding SIECUS' use of data, please read the FY 2018 Executive Summary, [A Portrait of Sex Education in the States](#).

LOUISIANA TEEN PREGNANCY, HUMAN IMMUNODEFICIENCY VIRUS (HIV)/ACQUIRED IMMUNODEFICIENCY SYNDROME (AIDS), AND OTHER SEXUALLY TRANSMITTED DISEASE (STD) DATA

The following data from the Centers for Disease Control and Prevention (CDC) and the Guttmacher Institute represent the most recent, uniform, state-specific statistics documenting teen pregnancy, birth, abortion, HIV/AIDS, and other STDs.¹⁶ While certain individual states may have more recent teen pregnancy or abortion data available, the data provided here represent cohesive information available for states across the nation. For those supporting the sexual health and well-being of young people, it is important to use the data to advance their access to comprehensive education, resources, and services. However, the data are not intended to be used in a manner that is stigmatizing or shaming: Young people have the right to make informed decisions about their health and well-being, but this right must be accompanied by the ability to access and understand all available choices. Therefore, the following data should be used to advance a young person's right to make informed decisions about their body and health.

Teen Pregnancy, Birth, and Abortion

- In 2013, Louisiana had the 6th highest reported teen pregnancy rate¹⁷ in the United States, with a rate of 54 pregnancies per 1,000 young women ages 15–19, compared to the national rate of 43 per 1,000.¹⁸ There were a total of 8,070 pregnancies among young women ages 15–19 reported in Louisiana in 2013.¹⁹
- In 2016, Louisiana had the 6th highest reported teen birth rate in the United States, with a rate of 30.6 births per 1,000 young women ages 15–19, compared to the national rate of 22.3 per 1,000.²⁰ There were a total of 4,545 live births to young women ages 15–19 reported in Louisiana in 2016.²¹
- In 2013, Louisiana had the 28th highest reported teen abortion rate²² in the United States, with a rate of 7 abortions per 1,000 young women ages 15–19, compared to the national rate of 11 per 1,000.²³ There were a total of 1,000 abortions among young women ages 15–19 reported in Louisiana in 2013.²⁴

HIV and AIDS

- In 2016, the reported rate of diagnoses of HIV infection among adolescents ages 13–19 in Louisiana was 13.7 per 100,000, compared to the national rate of 5.7 per 100,000.²⁵
- In 2016, the reported rate of AIDS diagnoses among adolescents ages 13–19 in Louisiana was 1.9 per 100,000, compared to the national rate of 0.8 per 100,000.²⁶
- In 2016, the reported rate of diagnoses of HIV infection among young adults ages 20–24 in Louisiana was 68.8 per 100,000, compared to the national rate of 30.2 per 100,000.²⁷
- In 2016, the reported rate of AIDS diagnoses among young adults ages 20–24 in Louisiana was 15.3 per 100,000, compared to the national rate of 5.6 per 100,000.²⁸

STDs

- In 2016, Louisiana had the highest rate of reported cases of chlamydia among young people ages 15–19 in the United States, with an infection rate of 3,348.2 cases per 100,000, compared to the national rate of 1,929.2 per 100,000. In 2016, there were a total of 10,106 cases of chlamydia among young people ages 15–19 reported in Louisiana.²⁹
- In 2016, Louisiana had the 2nd highest rate of reported cases of gonorrhea among young people ages 15–19 in the United States, with an infection rate of 886.2 cases per 100,000, compared to the national rate of 379.8 per 100,000. In 2016, there were a total of 2,675 cases of gonorrhea among young people ages 15–19 reported in Louisiana.³⁰
- In 2016, Louisiana had the highest rate of reported cases of primary and secondary syphilis among young people ages 15–19 in the United States, with an infection rate of 34.5 cases per 100,000, compared to the national rate of 6.1 per 100,000. In 2016, there were a total of 104 cases of syphilis reported among young people ages 15–19 in Louisiana.³¹

Visit OAH's [Louisiana Adolescent Health Facts](#) for additional information.

LOUISIANA YOUTH RISK BEHAVIOR SURVEY (YRBS) DATA³²

The following sexual health behavior and outcome data represent some of the most recent information available on the health of young people who attend high schools in Louisiana. Though not perfect—for instance, using broad race and ethnicity categories can often distort and aggregate the experiences of a diverse group of respondents—the Youth Risk Behavior Survey (YRBS) is a critical resource for understanding the health behaviors of young people when used carefully and with an awareness of its limitations. Any missing data points indicate either a lack of enough respondents for a subcategory or the state's decision not to administer a question on the survey. SIECUS commends the CDC for conducting decades' worth of field studies to improve the accuracy and relevancy of the YRBS. Like the CDC, SIECUS underlines that “school and community interventions should focus not only on behaviors but also on the determinants of those behaviors.”³³

Reported never having been tested for HIV

- In 2017, 77.9% of female high school students and 77.3% of male high school students in Louisiana reported never having been tested for HIV, compared to 89.5% of female high school students and 91.9% of male high school students nationwide.
- In 2017, 74.6% of black high school students, 78.3% of Hispanic high school students, and 80.3% of white high school students in Louisiana reported never having been tested for HIV, compared to 84.8% of black high school students, 91.1% of Hispanic high school students, and 92.1% of white high school students nationwide.

Visit the CDC's [Youth Online](#) database for additional information on sexual behaviors.

LOUISIANA SCHOOL HEALTH PROFILES DATA³⁴

In 2017, the CDC released the School Health Profiles, which measure school health policies and practices and highlight which health topics were taught in schools across the country. Since the data were collected from self-administered questionnaires completed by schools' principals and lead health education teachers, the CDC notes that one limitation of the School Health Profiles is bias toward the reporting of more positive policies and practices.³⁵ In the School Health Profiles, the CDC identifies 19 sexual education topics that it believes are critical to a young person's sexual health. Below are key instruction highlights for secondary schools in Louisiana as reported for the 2015–2016 school year.

19 CRITICAL SEXUAL EDUCATION TOPICS IDENTIFIED BY THE CDC

- 1) Communication and negotiation skills
- 2) Goal-setting and decision-making skills
- 3) How to create and sustain healthy and respectful relationships
- 4) Influences of family, peers, media, technology, and other factors on sexual risk behavior
- 5) Preventive care that is necessary to maintain reproductive and sexual health
- 6) Influencing and supporting others to avoid or reduce sexual risk behaviors
- 7) Benefits of being sexually abstinent
- 8) Efficacy of condoms
- 9) Importance of using condoms consistently and correctly
- 10) Importance of using a condom at the same time as another form of contraception to prevent both STDs and pregnancy
- 11) How to obtain condoms
- 12) How to correctly use a condom
- 13) Methods of contraception other than condoms
- 14) How to access valid and reliable information, products, and services related to HIV, STDs, and pregnancy
- 15) How HIV and other STDs are transmitted
- 16) Health consequences of HIV, other STDs, and pregnancy
- 17) Importance of limiting the number of sexual partners
- 18) Sexual orientation
- 19) Gender roles, gender identity, or gender expression.

Source: School Health Profiles, 2016

Reported teaching all 19 critical sexual health education topics

- 11% of Louisiana secondary schools taught students all 19 critical sexual health education topics in a required course in any of grades 6, 7, or 8.³⁶
- 16% of Louisiana secondary schools taught students all 19 critical sexual health education topics in a required course in any of grades 9, 10, 11, or 12.³⁷

Reported teaching about the benefits of being sexually abstinent

- 38.9% of Louisiana secondary schools taught students about the benefits of being sexually abstinent in a required course in any of grades 6, 7, or 8.³⁸
- 72.9% of Louisiana secondary schools taught students about the benefits of being sexually abstinent in a required course in any of grades 9, 10, 11, or 12.³⁹

Reported teaching how to access valid and reliable information, products, and services related to HIV, other STDs, and pregnancy

- 35.5% of Louisiana secondary schools taught students how to access valid and reliable information, products, and services related to HIV, other STDs, and pregnancy in a required course in any of grades 6, 7, or 8.⁴⁰
- 70.6% of Louisiana secondary schools taught students how to access valid and reliable information, products, and services related to HIV, other STDs, and pregnancy in a required course in any of grades 9, 10, 11, or 12.⁴¹

Reported teaching how to create and sustain healthy and respectful relationships

- 44.8% of Louisiana secondary schools taught students how to create and sustain healthy and respectful relationships in a required course in any of grades 6, 7, or 8.⁴²
- 72.3% of Louisiana secondary schools taught students how to create and sustain healthy and respectful relationships in a required course in any of grades 9, 10, 11, or 12.⁴³

Reported teaching about preventive care that is necessary to maintain reproductive and sexual health

- 31.1% of Louisiana secondary schools taught students about preventive care that is necessary to maintain reproductive and sexual health in a required course in any of grades 6, 7, or 8.⁴⁴
- 61.8% of Louisiana secondary schools taught students about preventive care that is necessary to maintain reproductive and sexual health in a required course in any of grades 9, 10, 11, or 12.⁴⁵

Reported teaching how to correctly use a condom

- 13.5% of Louisiana secondary schools taught students how to correctly use a condom in a required course in any of grades 6, 7, or 8.⁴⁶
- 22.2% of Louisiana secondary schools taught students how to correctly use a condom in a required course in any of grades 9, 10, 11, or 12.⁴⁷

Reported teaching about methods of contraception other than condoms

- 21.1% of Louisiana secondary schools taught students about methods of contraception other than condoms in a required course in any of grades 6, 7, or 8.⁴⁸
- 42.1% of Louisiana secondary schools taught students about methods of contraception other than condoms in a required course in any of grades 9, 10, 11, or 12.⁴⁹

Reported teaching about sexual orientation

- 19.5% of Louisiana secondary schools taught students about sexual orientation in a required course in any of grades 6, 7, or 8.⁵⁰

- 31.5% of Louisiana secondary schools taught students about sexual orientation in a required course in any of grades 9, 10, 11, or 12.⁵¹

Reported teaching about gender roles, gender identity, or gender expression

- 20.4% of Louisiana secondary schools taught students about gender roles, gender identity, or gender expression in a required course in any of grades 6, 7, or 8.⁵²
- 34.3% of Louisiana secondary schools taught students about gender roles, gender identity, or gender expression in a required course in any of grades 9, 10, 11, or 12.⁵³

Reported providing curricula or supplementary materials relevant to lesbian, gay, bisexual, transgender, or questioning (LGBTQ) youth

- 23.9% of Louisiana secondary schools provided students with curricula or supplementary materials that included HIV, STD, or pregnancy prevention information relevant to LGBTQ youth.⁵⁴

Visit the CDC's [School Health Profiles](#) report for additional information on school health policies and practices.

FEDERAL FUNDING FOR SEX EDUCATION, UNINTENDED TEEN PREGNANCY, HUMAN IMMUNODEFICIENCY VIRUS (HIV) AND OTHER SEXUALLY TRANSMITTED DISEASE (STD) PREVENTION, AND ABSTINENCE-ONLY-UNTIL-MARRIAGE (AOUM) PROGRAMS

Congress provides funding for evidence-based and innovative approaches to sex education through the CDC, OAH, and FYSB. These programs support the implementation of comprehensive sexuality education components and prioritize prevention of unintended pregnancy, HIV, and other sexually transmitted infections (STIs) among young people. The following is an overview of the federal programs and funding awarded to this state. Throughout this section, all programs are identified as they appear in official, federal documentation. However, SIECUS believes that AOUM, or so-called “Sexual Risk Avoidance,” programs are not to be identified as “educational.” These programs’ practice of withholding information from young people is not education but is, rather, the absence of education.

FEDERAL FUNDING IN LOUISIANA

Grantee	FY17 Award	FY18 Award
Division of Adolescent and School Health (DASH)		
Louisiana Department of Education	\$58,707	\$99,741

DIVISION OF ADOLESCENT AND SCHOOL HEALTH (DASH)

The CDC's school-based HIV prevention efforts include funding and technical assistance to state and local education agencies through several funding streams to better student health, implement HIV/STD prevention programs, collect and report data on young people's risk behaviors, and expand capacity-building partnerships. In FY 2018, through the CDC's Division of Adolescent and School Health (DASH), 28 school districts received funding to help the districts and schools strengthen student health through sexual health education (SHE) that emphasizes HIV and other STD prevention, increases access to key sexual health services (SHS), and establishes safe and supportive environments (SSEs) for students and staff. DASH funded six national, non-governmental organizations (NGOs) to help state and local education agencies achieve these goals.

- In FY 2018, there were no DASH grantees in Louisiana funded to strengthen student health through SHE, SHS, and SSEs (1807 Component 2).

DASH also provides funding for state, territorial, local, and tribal education agencies and state health agencies to establish and strengthen systematic procedures to collect and report YRBS and School Health Profiles data for policy and program improvements.

- In FY 2018, there was one DASH grantee in Louisiana funded to collect and report YRBS and School Health Profiles data (1807 Component 1): The Louisiana Department of Education (\$99,741).

TEEN PREGNANCY PREVENTION PROGRAM (TPPP)

OAH, within the U.S. Department of Health and Human Services (HHS), administers the Teen Pregnancy Prevention Program (TPPP), which, according to FY 2018 appropriations language, funds evidence-based (Tier 1) or innovative evidence-informed (Tier 2), medically accurate, and age-appropriate programs to reduce teen pregnancy. In FY 2018, total funding for TPPP was \$101 million. OAH also provides program support, implementation evaluation, and technical assistance to grantees and receives an additional \$6.8

million in funding for evaluation purposes. For detailed information on the current status of TPPP funding, please refer to the explanation below.

Tier 1: Replicating programs – evidence-based,⁵⁵ medically accurate, and age-appropriate programs to reduce teen pregnancy.

- OAH, under the Trump Administration, has refused to fund TPPP Tier 1 grantees in accordance with the law.

Tier 2: New and innovative strategies – evidence-informed, medically accurate, and age-appropriate programs to reduce teen pregnancy.

- In FY 2018, there were no TPPP Tier 2 grantees in Louisiana.

Trump Administration Attempts to Undermine Teen Pregnancy Prevention Program

The Trump administration has subjected the Teen Pregnancy Prevention Program (TPPP) to a wide variety of unlawful attacks, attempting to transform the program into an additional funding stream for abstinence-only-until-marriage (AOUM) (now being called “Sexual Risk Avoidance”) programs. Attacks to TPPP have largely been led by Trump-appointed ideologues who are known to be leading opponents of comprehensive sexuality education, despite objections of career staff at HHS.

Since taking office, the Trump administration has called for the elimination of TPPP through the president’s initial budget request, attempted to illegally shorten TPPP grant periods, and violated Congressional intent in attempts to shift programmatic guidelines—all in an effort to prioritize their abstinence-only ideology over evidence of what works best to ensure the sexual health and well-being of young people.

In June and July 2017, all 84 TPPP grantees were notified, without cause or explanation, that their five-year project periods would be shortened to three. Four legal challenges were filed against the Trump administration in response to the early termination of the TPPP grants. The courts ruled in favor of the plaintiffs, stating that the Trump administration’s action was unlawful.

In April 2018, the Office of Adolescent Health (OAH) released new funding opportunity announcements (FOAs) for TPPP Tier 1 (Replicating Programs) and Tier 2 (New and Innovative Strategies). The new FOAs represented a significant shift from funding evidence-based programs with a focus on evaluation toward the prioritization of abstinence-only ideology. Like the unlawful grant termination, the Tier 1 FOA was also challenged in court and ruled illegal for violating Congressional intent. The Tier 2 FOA, however, was not vacated by the courts, and SIECUS was able to obtain FY 2018 data for the Tier 2 grantees.

Fortunately, the Trump administration’s unlawful efforts to subvert TPPP funding have been consistently constrained by federal courts. However, HHS recently announced a list of grantees that, they claim, would have been awarded a total of \$19.4 million in FY 2018 TPPP Tier 1 funding – had the courts not determined it was an illegal attempt to subvert the will of Congress. The same announcement also attempted to blame the plaintiffs who sued the administration over its act of subterfuge. Furthermore, SIECUS’ attempts to identify how the missing \$19.4 million in designated TPPP Tier 1 funds have been reallocated or otherwise used have been blocked by the Trump administration. Currently, Congress is reasserting its oversight authority over the program, particularly since any use of these funds beyond what TPPP requires would be unlawful. Because information regarding the Tier 1 funds are being withheld, this year’s *State Profiles* only contain Tier 2 data.

PERSONAL RESPONSIBILITY EDUCATION PROGRAM (PREP)

FYSB, within the Administration for Children and Families (ACF) division of HHS, administers the Personal Responsibility Education Program (PREP), which was re-authorized for a total of \$75 million in FY 2018 and FY 2019. PREP funds a state-grant program, the Personal Responsibility Education Innovative Strategies (PREIS) program, which supports research and demonstration projects that implement innovative strategies for preventing pregnancy; and the Tribal Personal Responsibility Education Program (Tribal PREP), which funds tribes and tribal organizations. In addition, a provision within the PREP statute, called the Competitive Personal Responsibility Education Program (CPREP), enables community- and faith-based organizations within states and territories that do not directly seek PREP state grants to apply for funding through a competitive application process.

Similar to other programs highlighted in the State Profiles, the grants for the various PREP programs are awarded throughout the year, with several awarded in the final month of the fiscal year for use and implementation throughout the following year. SIECUS reports on funding amounts appropriated in FY 2018 and any programmatic activities that occurred during FY 2018 (October 1, 2017–September 30, 2018). It is important to remember, however, that reported programmatic activities for this period may have utilized FY 2017 funds. Details on the state grants, PREIS, Tribal PREP, and CPREP are included below. Please see below for detailed information on the PREP grant data withheld by FYSB.

PREP Program at Risk of Misuse

While PREP has not faced the same scrutiny as TPPP, the Trump administration is suspected of attempting to transform this evidence-based program into an additional funding stream for abstinence-only programs.

PREP grantee funding data from FYSB are public and have been successfully acquired by SIECUS for the past 15 years—working with both Republican and Democrat administrations—prior to the Trump administration. Yet, for the first time ever, FYSB has ignored SIECUS’ many requests for grantee funding data this year.

With a five-year reauthorization of PREP slated for early 2019, SIECUS remains highly concerned that the Trump administration, and its ideologically-driven political appointees, will pursue another opportunity to eliminate evidence-based programming in order to further increase abstinence-only funding.

Personal Responsibility Education Program (PREP) State-Grant Program

The PREP state-grant program supports evidence-based programs that provide young people with medically accurate and age-appropriate information for the prevention of unintended pregnancy, HIV, and other STDs. Funded programs must discuss abstinence and contraception and place substantial emphasis on both. Programs must also address at least three of the following adulthood preparation subjects: healthy relationships, positive adolescent development, financial literacy, parent-child communication skills, education and employment skills, and healthy life skills. PREP programs target young people who are experiencing homelessness, are in foster care, are living in rural areas or areas with high rates of adolescent births, and are from minority groups.

Personal Responsibility Education Innovative Strategies (PREIS)

PREIS funds local entities through a competitive grant program to support research and demonstration programs to develop, replicate, refine, and test innovative models for preventing unintended teen pregnancy, HIV, and other STDs among young people ages 10-19.

Tribal Personal Responsibility Education Program (Tribal PREP)

Tribal PREP supports the development and implementation of pregnancy-, HIV-, and other STD-prevention programs among native young people within tribes and tribal communities. Tribal PREP programs are designed to honor tribal needs, traditions, and cultures.

Competitive Personal Responsibility Education Program (CPREP)

CPREP grants support evidence-based programs that provide young people with medically accurate and age-appropriate information for the prevention of unintended pregnancy, HIV, and other STDs. Only organizations and institutions in states and territories that did not apply for PREP state grants are eligible to submit competitive applications for CPREP grants.

TITLE V SEXUAL RISK AVOIDANCE EDUCATION GRANT PROGRAM

The Title V Sexual Risk Avoidance Education Grant program (“Title V SRAE”), previously called the Title V AOUM program,⁵⁶ is administered by FYSB, within ACF of HHS, and was authorized at \$75 million for FY 2018. This state-based program must exclusively promote that “the unambiguous and primary emphasis and context” for each topic required to be taught in the new A–F definition⁵⁷ of “education on sexual risk avoidance” is a “message to youth that normalizes the optimal health behavior of avoiding nonmarital sexual activity.” While grantees were required from FYs 1998–2017 to provide three state-raised dollars, or the equivalent in services, for every four federal dollars received, the state-match provision is no longer required. In FY 2018, FYSB withheld detailed information about Title V SRAE grantees and provided only the dollar amount awarded to each state.

Unlike TPPP and PREP, the Title V SRAE grant program was always intended to promote failed⁵⁸ abstinence-only programs, or so-called “Sexual Risk Avoidance” programs, rather than evidence-based sex education. However, what began as a tiny sliver of the federal budget has been funded at exponentially higher levels every year. As evidence-based programs like TPPP face continued threats of elimination, SRAE has seen a seven-fold increase in funding since its inception in 2012 (when it was known as the Competitive Abstinence Education program). The Trump administration claims that the government does not have funds to spend on adolescent sexual health. However, the numbers prove the baselessness of this claim: To date, more than \$2.2 *billion* have been wasted on failed AOUM programs like Title V SRAE.

- In FY 2018, the State of Louisiana received \$1,248,563 in federal Title V SRAE funding.⁵⁹

SEXUAL RISK AVOIDANCE EDUCATION (SRAE) PROGRAM

Administered by FYSB within ACF of HHS, the SRAE program—a rebranding of the Competitive Abstinence Education program—provides funding for public and private entities for programs that “teach young people to voluntarily refrain from non-marital sexual activity and prevent other youth risk behaviors.” These programs are also required by statute to “teach the benefits associated with self-regulation; success sequencing for poverty prevention; healthy relationships; goal setting and resisting sexual coercion; dating violence; and other youth risk behaviors, such as underage drinking or illicit drug use, without normalizing teen sexual activity.” In FY 2018, \$25 million was appropriated for the SRAE grant program, and \$11.9 million was awarded to 27 grantees in 15 states through a competitive application process.

- In FY 2018, there were no SRAE grantees in Louisiana.

⁵⁵ Evidence-informed curricula are intended to educate youth, building knowledge and skills, while evidence-based programs and interventions are focused solely on reducing “negative” health outcomes.

⁵⁶ In the FY 2018 reauthorization, the “Title V State Abstinence Education Grant Program” was renamed the “Title V Sexual Risk Avoidance Education” (SRAE) program. The definition of the Title V program was changed to mandate that grantees adhere to a new A-F definition as opposed to the [old A-H definition](#) for Title V programs.

⁵⁷ 42 U.S.C. 710, Title V, Section 510 of the Social Security Act, the authorization for the Title V Sexual Risk Avoidance Education grant program, requires that “education on sexual risk avoidance” programs address each of the following topics:

(A) the holistic individual and societal benefits associated with personal responsibility, self-regulation, goal setting, healthy decision-making, and a focus on the future;

(B) the advantage of refraining from nonmarital sexual activity in order to improve the future prospects and physical and emotional health of youth;

(C) the increased likelihood of avoiding poverty when youth attain self-sufficiency and emotional maturity before engaging in sexual activity;

(D) the foundational components of healthy relationships and their impact on the formation of healthy marriages and safe and stable families;

(E) how other youth risk behaviors, such as drug and alcohol usage, increase the risk for teen sex; and

(F) how to resist and avoid, and receive help regarding, sexual coercion and dating violence, recognizing that, even with consent, teen sex remains a youth risk behavior.

Regarding contraception, Title V programs must also ensure that “students understand that contraception offers physical risk reduction, but not risk elimination” and that “the education does not include demonstrations, simulations, or distribution of contraceptive devices.”
