

**SIECUS**Sexuality Information and Education  
Council of the United States

# State Profiles **FISCAL YEAR 2018**

The complete FY 2018 State Profiles comprise individual state-specific documents along with four other accompanying documents. The Executive Summary details the current state of sex education across the country, highlighting trends observed over the past few decades. Additionally, it is critical to examine the information from each state within the larger context of the laws and federal funding streams across the country. Please reference the following documents to inform and contextualize broader sex education trends:

- [Executive Summary](#)
- [Federal Funding Overview](#) – compared to [Arizona’s federal funding](#)
- [Sex/Sexuality and human immunodeficiency virus \(HIV\) and other sexually transmitted infections \(STIs\) Education Laws by State](#) – compared to [Arizona’s education laws](#)
- [Descriptions of Curricula and Programs across the United States.](#)

## ARIZONA

For the last 15 years, SIECUS has released the SIECUS State Profiles to provide an overview of federally funded adolescent sexual health promotion and abstinence-only-until-marriage (AOUM) programs in the United States. Indeed, the SIECUS State Profiles’ annual reporting provide invaluable insight into 15 years’ worth of data documenting how funds for these programs are used and implemented in every state. Prior to this year, SIECUS has worked with every federal administration – Democrat and Republican – to collect and report this data.

Unfortunately, the 2018 SIECUS State Profiles do not include this standard level of information that readers have come to expect. The Trump administration has repeatedly ignored requests for information detailing federal funds issued through the Department of Health and Human Services’ (HHS) Office of Adolescent Health (OAH) and Federal Youth Service Bureau (FYSB). In fact, the 2018 SIECUS State Profiles were delayed in publication because SIECUS staff engaged in repeated, but ultimately futile, good-faith efforts to work with these agencies under the Trump administration to obtain this expected data.

The lack of information provided in this year’s State Profiles is just one more example of the Trump administration’s lack of transparency, willingness to ignore evidence and research, and disregard for Congressional intent of Obama-era federal programs—particularly those designed to ensure the sexual health and well-being of young people. In place of the data that readers have come to expect, this report will instead highlight some of the adverse, and potentially unlawful, actions that these agencies under the Trump administration have taken to subvert the commitment to comprehensive sexual health information that this country has come to expect.

While severely disappointing, this omission of information reinforces the need to broadcast this well-documented truth: AOUM programs (now being called “Sexual Risk Avoidance”) are ineffective.<sup>1</sup>

Furthermore, despite the best efforts of agencies under the Trump administration to obscure their illegitimate intent to misuse public funding for sex education, SIECUS will continue to hold this

administration accountable, to seek full transparency in reporting; push Congress to assert its oversight authority; and ensure that policymakers and the public continue to receive accurate, up-to-date information needed to inform appropriate and effective use of public resources to advance the health and well-being of our nation's youth.

## SEXUALITY EDUCATION LAW AND POLICY

### STATE LAW

Arizona law does not require schools to teach sexuality education or education on human immunodeficiency virus (HIV). However, [Arizona Revised Statutes §§ 15-711, 15-716, and 15-102](#) state that if a school chooses to teach these topics, instruction must be age-appropriate, include instruction on the laws relating to sexual conduct with a minor (grades 7 through 12), and stress abstinence. Further, if a school chooses to teach HIV education, such instruction must be medically accurate but cannot promote a “homosexual lifestyle,” portray “homosexuality as a positive alternative lifestyle,” or “suggest that some methods of sex are safe methods of homosexual sex.”<sup>2</sup>

[Arizona Administrative Code R7-2-303](#) states that schools may “provide a specific elective lesson or lessons concerning sex education as a supplement to the health course of study.” Schools that choose to provide sex education must have the lessons approved by the school's local governing board.<sup>3</sup> All sex education materials and instruction that discuss sexual intercourse must:

- i) Stress that pupils should abstain from sexual intercourse until they are mature adults;
- ii) Emphasize that abstinence from sexual intercourse is the only method for avoiding pregnancy that is 100% effective;
- iii) Stress that sexually transmitted diseases (STDs) have severe consequences and constitute a serious and widespread public health problem;
- iv) Include a discussion of the possible emotional and psychological consequences of preadolescent and adolescent sexual intercourse and the consequences of preadolescent and adolescent pregnancy;
- v) Promote honor and respect for monogamous heterosexual marriage; and
- vi) Advise pupils of Arizona law pertaining to the financial responsibilities of parenting and legal liabilities related to sexual intercourse with a minor.<sup>4</sup>

In Arizona, parents or guardians may remove their children from sex education or HIV instruction. [This is referred to as an “opt-out” policy](#). If a school chooses to provide a supplemental sex education course, the state requires written consent from parents before students may attend. [This is referred to as an “opt-in” policy](#).

### STATE STANDARDS

Arizona has [Health Education Standards](#) in place that provide a foundation for curricula in the state for grades K-12. Although concepts related to sexuality are not specifically mentioned in the standards, “disease prevention” is included.

### STATE LEGISLATIVE ACTIVITY

SIECUS tracks all state legislative session activity in our state legislative reports. For more information on bills related to school-based sex education that were introduced or passed by May 31, 2018, please see the most recent analysis of state legislative activity, [SIECUS' 2018 Sex Ed State Legislative Mid-Year Report](#).

## YOUTH SEXUAL HEALTH DATA

Young people are more than their health behaviors and outcomes. For those working to support the sexual health and well-being of young people, it is important to utilize available data in a manner that tracks our progress and pushes policies forward while respecting and supporting the dignity of all young lives.

While data can be a powerful tool to demonstrate the sex education and sexual health care needs of young people, it is important to be mindful that these behaviors and outcomes are impacted by systemic inequities present in our society that affect an individual's sexual health and well-being. That is, the context in which a young person's health behavior and decision-making happens is not reflected in individual data points. Notably, one example demonstrating such inequities are the limitations as to how and what data are currently collected; please be mindful of populations who may not be included in surveys or who may be misrepresented by the data. The data categories and any associated language are taken directly from the respective surveys and are not a representation of SIECUS' positions or values. For more information regarding SIECUS' use of data, please read the FY 2018 Executive Summary, [\*A Portrait of Sex Education in the States\*](#).

### ARIZONA TEEN PREGNANCY, HUMAN IMMUNODEFICIENCY VIRUS (HIV)/ACQUIRED IMMUNODEFICIENCY SYNDROME (AIDS), AND OTHER SEXUALLY TRANSMITTED DISEASE (STD) DATA

The following data from the Centers for Disease Control and Prevention (CDC) and the Guttmacher Institute represent the most recent, uniform, state-specific statistics documenting teen pregnancy, birth, abortion, HIV/acquired immune deficiency syndrome (AIDS), and other STDs.<sup>5</sup> While certain individual states may have more recent teen pregnancy or abortion data available, the data provided here represent cohesive information available for states across the nation. For those supporting the sexual health and well-being of young people, it is important to use the data to advance their access to comprehensive education, resources, and services. However, the data are not intended to be used in a manner that is stigmatizing or shaming: Young people have the right to make informed decisions about their health and well-being, but this right must be accompanied by the ability to access and understand all available choices. Therefore, the following data should be used to advance a young person's right to make informed decisions about their body and health.

#### Teen Pregnancy, Birth, and Abortion

- In 2013, Arizona had the 13th highest reported teen pregnancy rate<sup>6</sup> in the United States, with a rate of 47 pregnancies per 1,000 young women ages 15–19, compared to the national rate of 43 per 1,000.<sup>7</sup> There were a total of 10,300 pregnancies among young women ages 15–19 reported in Arizona in 2013.<sup>8</sup>
- In 2016, Arizona had the 17th highest reported teen birth rate in the United States, with a rate of 23.6 births per 1,000 young women ages 15–19, compared to the national rate of 22.3 per 1,000.<sup>9</sup> There were a total of 5,357 live births to young women ages 15–19 reported in Arizona in 2016.<sup>10</sup>
- In 2013, Arizona had the 28th highest reported teen abortion rate<sup>11</sup> in the United States, with a rate of 7 abortions per 1,000 young women ages 15–19, compared to the national rate of 11 per 1,000.<sup>12</sup> There were a total of 1,480 abortions among young women ages 15–19 reported in Arizona in 2013.<sup>13</sup>

**HIV and AIDS**

- In 2016, the reported rate of diagnoses of HIV infection among adolescents ages 13–19 in Arizona was 3.7 per 100,000, compared to the national rate of 5.7 per 100,000.<sup>14</sup>
- In 2016, the reported rate of AIDS diagnoses among adolescents ages 13–19 in Arizona was 0.5 per 100,000, compared to the national rate of 0.8 per 100,000.<sup>15</sup>
- In 2016, the reported rate of diagnoses of HIV infection among young adults ages 20–24 in Arizona was 27.8 per 100,000, compared to the national rate of 30.2 per 100,000.<sup>16</sup>
- In 2016, the reported rate of AIDS diagnoses among young adults ages 20–24 in Arizona was 3.5 per 100,000, compared to the national rate of 5.6 per 100,000.<sup>17</sup>

**STDs**

- In 2016, Arizona had the 27th highest rate of reported cases of chlamydia among young people ages 15–19 in the United States, with an infection rate of 1,826.8 cases per 100,000, compared to the national rate of 1,929.2 per 100,000. In 2016, there were a total of 8,421 cases of chlamydia among young people ages 15–19 reported in Arizona.<sup>18</sup>
- In 2016, Arizona had the 25th highest rate of reported cases of gonorrhea among young people ages 15–19 in the United States, with an infection rate of 332.1 cases per 100,000, compared to the national rate of 379.8 per 100,000. In 2016, there were a total of 1,531 cases of gonorrhea among young people ages 15–19 reported in Arizona.<sup>19</sup>
- In 2016, Arizona had the 4th highest rate of reported cases of primary and secondary syphilis among young people ages 15–19 in the United States, with an infection rate of 9.5 cases per 100,000, compared to the national rate of 6.1 per 100,000. In 2016, there were a total of 44 cases of syphilis reported among young people ages 15–19 in Arizona.<sup>20</sup>

Visit OAH's [Arizona Adolescent Health Facts](#) for additional information.

**ARIZONA YOUTH RISK BEHAVIOR SURVEY (YRBS) DATA<sup>21</sup>**

The following sexual health behavior and outcome data represent some of the most recent information available on the health of young people who attend high schools in Arizona. Though not perfect—for instance, using broad race and ethnicity categories can often distort and aggregate the experiences of a diverse group of respondents—the Youth Risk Behavior Survey (YRBS) is a critical resource for understanding the health behaviors of young people when used carefully and with an awareness of its limitations. Any missing data points indicate either a lack of enough respondents for a subcategory or the state's decision not to administer a question on the survey. SIECUS commends the CDC for conducting decades' worth of field studies to improve the accuracy and relevancy of the YRBS. Like the CDC, SIECUS underlines that “school and community interventions should focus not only on behaviors but also on the determinants of those behaviors.”<sup>22</sup>

Reported ever having had sexual intercourse

- In 2017, 32.3% of female high school students and 35.8% of male high school students in Arizona reported ever having had sexual intercourse, compared to 37.7% of female high school students and 41.4% of male high school students nationwide.
- In 2017, 46.3% of lesbian, gay, or bisexual (LGB) high school students, 33.2% of high school students who were unsure of their sexual orientation, and 32.7% of heterosexual high school students in Arizona reported ever having had sexual intercourse, compared to 48.4% of LGB high school students, 28.4% of high school students who were unsure of their sexual orientation, and 39.1% of heterosexual high school students nationwide.
- In 2017, 37.5% of Hispanic high school students and 32.8% of white high school students in Arizona reported ever having had sexual intercourse, compared to 41.1% of Hispanic high school students and 38.6% of white high school students nationwide.

Reported having had sexual intercourse before age 13

- In 2017, 1.1% of female high school students and 4.3% of male high school students in Arizona reported having had sexual intercourse before age 13, compared to 2% of female high school students and 4.8% of male high school students nationwide.
- In 2017, 5.4% of LGB high school students, 0.3% of high school students who were unsure of their sexual orientation, and 2.4% of heterosexual high school students in Arizona reported having had sexual intercourse before age 13, compared to 6.1% of LGB high school students, 4.1% of high school students who were unsure of their sexual orientation, and 3% of heterosexual high school students nationwide.
- In 2017, 3.9% of Hispanic high school students and 1.9% of white high school students in Arizona reported having had sexual intercourse before age 13, compared to 4% of Hispanic high school students and 2.1% of white high school students nationwide.

Reported being currently sexually active

- In 2017, 24% of female high school students and 26.1% of male high school students in Arizona reported being currently sexually active, compared to 28.8% of female high school students and 28.6% of male high school students nationwide.
- In 2017, 36.8% of LGB high school students, 9.4% of high school students who were unsure of their sexual orientation, and 24.1% of heterosexual high school students in Arizona reported being currently sexually active, compared to 33.7% of LGB high school students, 19.8% of high school students who were unsure of their sexual orientation, and 28.5% of heterosexual high school students nationwide.
- In 2017, 29% of Hispanic high school students and 23.8% of white high school students in Arizona reported being currently sexually active, compared to 29.2% of Hispanic high school students and 28.8% of white high school students nationwide.

Reported not using a condom during last sexual intercourse

- In 2017, 48.7% of female high school students and 45.8% of male high school students in Arizona reported not using a condom during their last sexual intercourse, compared to 53.1% of female high school students and 38.7% of male high school students nationwide.
- In 2017, 46.4% of LGB high school students and 47.7% of heterosexual high school students in Arizona reported not using a condom during their last sexual intercourse, compared to 60.1% of LGB high school students and 43.9% of heterosexual high school students nationwide.
- In 2017, 50% of Hispanic high school students and 48.3% of white high school students in Arizona reported not using a condom during their last sexual intercourse, compared to 45.1% of Hispanic high school students and 45.9% of white high school students nationwide.

Reported not using any method to prevent pregnancy during last sexual intercourse

- In 2017, 20.4% of female high school students and 13.7% of male high school students in Arizona reported not using any method to prevent pregnancy during their last sexual intercourse, compared to 16.7% of female high school students and 10.5% of male high school students nationwide.
- In 2017, 30.3% of LGB high school students and 14.3% of heterosexual high school students in Arizona reported not using any method to prevent pregnancy during their last sexual intercourse, compared to 27.4% of LGB high school students and 11.5% of heterosexual high school students nationwide.
- In 2017, 21.6% of Hispanic high school students and 12.6% of white high school students in Arizona reported not using any method to prevent pregnancy during their last sexual intercourse, compared to 19% of Hispanic high school students and 10% of white high school students nationwide.

Reported having had alcohol or used drugs during last sexual intercourse<sup>23</sup>

- In 2017, 16.4% of female high school students and 20.1% of male high school students in Arizona reported having had alcohol or used drugs during their last sexual intercourse, compared to 15.9% of female high school students and 21.6% of male high school students nationwide.
- In 2017, 34.4% of LGB high school students and 15.2% of heterosexual high school students in Arizona reported having had alcohol or used drugs during their last sexual intercourse, compared to 20.3% of LGB high school students and 18% of heterosexual high school students nationwide.
- In 2017, 15.3% of Hispanic high school students and 19.4% of white high school students in Arizona reported having had alcohol or used drugs during their last sexual intercourse, compared to 17.7% of Hispanic high school students and 18.7% of white high school students nationwide.

Reported having been physically forced to have sexual intercourse

- In 2017, 11.5% of female high school students and 4.5% of male high school students in Arizona reported having been physically forced to have sexual intercourse, compared to 11.3% of female high school students and 3.5% of male high school students nationwide.
- In 2017, 23.4% of LGB high school students, 4.9% of high school students who were unsure of their sexual orientation, and 6.1% of heterosexual high school students in Arizona reported having been physically forced to have sexual intercourse, compared to 21.9% of LGB high school students, 13.1% of high school students who were unsure of their sexual orientation, and 5.4% of heterosexual high school students nationwide.
- In 2017, 8.9% of Hispanic high school students and 7.1% of white high school students in Arizona reported having been physically forced to have sexual intercourse, compared to 7.3% of Hispanic high school students and 7.3% of white high school students nationwide.

Visit the CDC's [Youth Online](#) database for additional information on sexual behaviors.

**ARIZONA SCHOOL HEALTH PROFILES DATA<sup>24</sup>**

In 2017, the CDC released the School Health Profiles, which measure school health policies and practices and highlight which health topics were taught in schools across the country. Since the data were collected from self-administered questionnaires completed by schools' principals and lead health education teachers, the CDC notes that one limitation of the School Health Profiles is bias toward the reporting of more positive policies and practices.<sup>25</sup> In the School Health Profiles, the CDC identifies 19 sexual education topics that it believes are critical to a young person's sexual health. Below are key instruction highlights for secondary schools in Arizona as reported for the 2015–2016 school year.

**19 CRITICAL SEXUAL EDUCATION TOPICS IDENTIFIED BY THE CDC**

- 1) Communication and negotiation skills
- 2) Goal-setting and decision-making skills
- 3) How to create and sustain healthy and respectful relationships
- 4) Influences of family, peers, media, technology, and other factors on sexual risk behavior
- 5) Preventive care that is necessary to maintain reproductive and sexual health
- 6) Influencing and supporting others to avoid or reduce sexual risk behaviors
- 7) Benefits of being sexually abstinent
- 8) Efficacy of condoms
- 9) Importance of using condoms consistently and correctly
- 10) Importance of using a condom at the same time as another form of contraception to prevent both STDs and pregnancy
- 11) How to obtain condoms
- 12) How to correctly use a condom
- 13) Methods of contraception other than condoms
- 14) How to access valid and reliable information, products, and services related to HIV, STDs, and pregnancy
- 15) How HIV and other STDs are transmitted
- 16) Health consequences of HIV, other STDs, and pregnancy
- 17) Importance of limiting the number of sexual partners
- 18) Sexual orientation
- 19) Gender roles, gender identity, or gender expression.

*Source: School Health Profiles, 2016*

Reported teaching all 19 critical sexual health education topics

- 5.1% of Arizona secondary schools taught students all 19 critical sexual health education topics in a required course in any of grades 6, 7, or 8.<sup>26</sup>
- 14.5% of Arizona secondary schools taught students all 19 critical sexual health education topics in a required course in any of grades 9, 10, 11, or 12.<sup>27</sup>

Reported teaching about the benefits of being sexually abstinent

- 17.7% of Arizona secondary schools taught students about the benefits of being sexually abstinent in a required course in any of grades 6, 7, or 8.<sup>28</sup>
- 41.6% of Arizona secondary schools taught students about the benefits of being sexually abstinent in a required course in any of grades 9, 10, 11, or 12.<sup>29</sup>

Reported teaching how to access valid and reliable information, products, and services related to HIV, other STDs, and pregnancy

- 13.3% of Arizona secondary schools taught students how to access valid and reliable information, products, and services related to HIV, other STDs, and pregnancy in a required course in any of grades 6, 7, or 8.<sup>30</sup>
- 36.2% of Arizona secondary schools taught students how to access valid and reliable information, products, and services related to HIV, other STDs, and pregnancy in a required course in any of grades 9, 10, 11, or 12.<sup>31</sup>

Reported teaching how to create and sustain healthy and respectful relationships

- 17.7% of Arizona secondary schools taught students how to create and sustain healthy and respectful relationships in a required course in any of grades 6, 7, or 8.<sup>32</sup>
- 44.5% of Arizona secondary schools taught students how to create and sustain healthy and respectful relationships in a required course in any of grades 9, 10, 11, or 12.<sup>33</sup>

Reported teaching about preventive care that is necessary to maintain reproductive and sexual health

- 10.8% of Arizona secondary schools taught students about preventive care that is necessary to maintain reproductive and sexual health in a required course in any of grades 6, 7, or 8.<sup>34</sup>
- 34.7% of Arizona secondary schools taught students about preventive care that is necessary to maintain reproductive and sexual health in a required course in any of grades 9, 10, 11, or 12.<sup>35</sup>

Reported teaching how to correctly use a condom

- 6.1% of Arizona secondary schools taught students how to correctly use a condom in a required course in any of grades 6, 7, or 8.<sup>36</sup>
- 22.5% of Arizona secondary schools taught students how to correctly use a condom in a required course in any of grades 9, 10, 11, or 12.<sup>37</sup>

Reported teaching about methods of contraception other than condoms

- 7.2% of Arizona secondary schools taught students about methods of contraception other than condoms in a required course in any of grades 6, 7, or 8.<sup>38</sup>
- 35.9% of Arizona secondary schools taught students about methods of contraception other than condoms in a required course in any of grades 9, 10, 11, or 12.<sup>39</sup>

Reported teaching about sexual orientation

- 8.9% of Arizona secondary schools taught students about sexual orientation in a required course in any of grades 6, 7, or 8.<sup>40</sup>
- 27.5% of Arizona secondary schools taught students about sexual orientation in a required course in any of grades 9, 10, 11, or 12.<sup>41</sup>

Reported teaching about gender roles, gender identity, or gender expression

- 10.2% of Arizona secondary schools taught students about gender roles, gender identity, or gender expression in a required course in any of grades 6, 7, or 8.<sup>42</sup>
- 28.5% of Arizona secondary schools taught students about gender roles, gender identity, or gender expression in a required course in any of grades 9, 10, 11, or 12.<sup>43</sup>

Reported providing curricula or supplementary materials relevant to lesbian, gay, bisexual, transgender, or questioning (LGBTQ) youth

- 20.2% of Arizona secondary schools provided students with curricula or supplementary materials that included HIV, STD, or pregnancy prevention information relevant to LGBTQ youth.<sup>44</sup>

Visit the CDC's [School Health Profiles](#) report for additional information on school health policies and practices.

## **FEDERAL FUNDING FOR SEX EDUCATION, UNINTENDED TEEN PREGNANCY, HUMAN IMMUNODEFICIENCY VIRUS (HIV) AND OTHER SEXUALLY TRANSMITTED DISEASE (STD) PREVENTION, AND ABSTINENCE-ONLY-UNTIL-MARRIAGE (AOUM) PROGRAMS**

Congress provides funding for evidence-based and innovative approaches to sex education through the CDC, OAH, and FYSB. These programs support the implementation of comprehensive sexuality education components and prioritize prevention of unintended pregnancy, HIV, and other sexually transmitted infections (STIs) among young people. The following is an overview of the federal programs and funding awarded to this state. Throughout this section, all programs are identified as they appear in official, federal documentation. However, SIECUS believes that AOUM, or so-called “Sexual Risk Avoidance,” programs are not to be identified as “educational.” These programs’ practice of withholding information from young people is not education but is, rather, the absence of education.

**DIVISION OF ADOLESCENT AND SCHOOL HEALTH (DASH)**

The CDC's school-based HIV prevention efforts include funding and technical assistance to state and local education agencies through several funding streams to better student health, implement HIV/STD prevention programs, collect and report data on young people's risk behaviors, and expand capacity-building partnerships. In FY 2018, through the CDC's Division of Adolescent and School Health (DASH), 28 school districts received funding to help the districts and schools strengthen student health through sexual health education (SHE) that emphasizes HIV and other STD prevention, increases access to key sexual health services (SHS), and establishes safe and supportive environments (SSEs) for students and staff. DASH

funded six national, non-governmental organizations (NGOs) to help state and local education agencies achieve these goals.

- In FY 2018, there were no DASH grantees in Arizona funded to strengthen student health through SHE, SHS, and SSEs (1807 Component 2).

DASH also provides funding for state, territorial, local, and tribal education agencies and state health agencies to establish and strengthen systematic procedures to collect and report YRBS and School Health Profiles data for policy and program improvements.

- In FY 2018, there was one DASH grantee in Arizona funded to collect and report YRBS and School Health Profiles data (1807 Component 1): The Arizona Department of Health Services (\$94,329).

### **TEEN PREGNANCY PREVENTION PROGRAM (TPPP)**

OAH, within the U.S. Department of Health and Human Services (HHS), administers the Teen Pregnancy Prevention Program (TPPP), which, according to FY 2018 appropriations language, funds evidence-based (Tier 1) or innovative evidence-informed (Tier 2), medically accurate, and age-appropriate programs to reduce teen pregnancy. In FY 2018, total funding for TPPP was \$101 million. OAH also provides program support, implementation evaluation, and technical assistance to grantees and receives an additional \$6.8 million in funding for evaluation purposes. For detailed information on the current status of TPPP funding, please refer to the explanation below.

Tier 1: Replicating programs – evidence-based,<sup>45</sup> medically accurate, and age-appropriate programs to reduce teen pregnancy.

- OAH, under the Trump administration, has refused to fund TPPP Tier 1 grantees in accordance with the law.

Tier 2: New and innovative strategies – evidence-informed, medically accurate, and age-appropriate programs to reduce teen pregnancy.

- In FY 2018, there was one TPPP Tier 2 grantee in Arizona: Teen Outreach Pregnancy Services (\$375,000).<sup>46</sup>

TEEN OUTREACH PREGNANCY SERVICES, \$375,000 (FY 2018)

Teen Outreach Pregnancy Services (TOPS) will deliver its “[Starting Out Right for Teen Parents](#)” (SORTP) program to low-income expectant and parenting teens ages 14-19 residing in Maricopa and Pima Counties, AZ. The SORTP is a risk reduction model that will deliver an innovative combination of pre- and post-natal supports to enrolled expectant and parenting teens in five formats: 1) case management services; 2) group pregnancy education classes (prior to delivery); 3) home visits; 4) interactive virtual learning sessions with a health educator; and 5) use of a companion mobile app. TOPS is eager to test the effectiveness of this new service delivery combination as a way to reach teens more efficiently and effectively in the electronic age, and also to provide a high level of intensive support within the first six months after giving birth – a critical time in RRP prevention and personal skill building.<sup>47</sup>

### **Trump Administration Attempts to Undermine Teen Pregnancy Prevention Program**

The Trump administration has subjected the Teen Pregnancy Prevention Program (TPPP) to a wide variety of unlawful attacks, attempting to transform the program into an additional funding stream for abstinence-only-until-marriage (AOUM) (now being called “Sexual Risk Avoidance”) programs. Attacks to TPPP have largely been led by Trump-appointed ideologues who are known to be leading opponents

of comprehensive sexuality education, despite objections of career staff at HHS.

Since taking office, the Trump administration has called for the elimination of TPPP through the president's initial budget request, attempted to illegally shorten TPPP grant periods, and violated Congressional intent in attempts to shift programmatic guidelines—all in an effort to prioritize their abstinence-only ideology over evidence of what works best to ensure the sexual health and well-being of young people.

In June and July 2017, all 84 TPPP grantees were notified, without cause or explanation, that their five-year project periods would be shortened to three. Four legal challenges were filed against the Trump administration in response to the early termination of the TPPP grants. The courts ruled in favor of the plaintiffs, stating that the Trump administration's action was unlawful.

In April 2018, the Office of Adolescent Health (OAH) released new funding opportunity announcements (FOAs) for TPPP Tier 1 (Replicating Programs) and Tier 2 (New and Innovative Strategies). The new FOAs represented a significant shift from funding evidence-based programs with a focus on evaluation toward the prioritization of abstinence-only ideology. Like the unlawful grant termination, the Tier 1 FOA was also challenged in court and ruled illegal for violating Congressional intent. The Tier 2 FOA, however, was not vacated by the courts, and SIECUS was able to obtain FY 2018 data for the Tier 2 grantees.

Fortunately, the Trump administration's unlawful efforts to subvert TPPP funding have been consistently constrained by federal courts. However, HHS recently announced a list of grantees that, they claim, would have been awarded a total of \$19.4 million in FY 2018 TPPP Tier 1 funding – had the courts not determined it was an illegal attempt to subvert the will of Congress. The same announcement also attempted to blame the plaintiffs who sued the administration over its act of subterfuge. Furthermore, SIECUS' attempts to identify how the missing \$19.4 million in designated TPPP Tier 1 funds have been reallocated or otherwise used have been blocked by the Trump administration. Currently, Congress is reasserting its oversight authority over the program, particularly since any use of these funds beyond what TPPP requires would be unlawful. Because information regarding the Tier 1 funds are being withheld, this year's *State Profiles* only contain Tier 2 data.

### **PERSONAL RESPONSIBILITY EDUCATION PROGRAM (PREP)**

FYSB, within the Administration for Children and Families (ACF) division of HHS, administers the Personal Responsibility Education Program (PREP), which was re-authorized for a total of \$75 million in FY 2018 and FY 2019. PREP funds a state-grant program, the Personal Responsibility Education Innovative Strategies (PREIS) program, which supports research and demonstration projects that implement innovative strategies for preventing pregnancy; and the Tribal Personal Responsibility Education Program (Tribal PREP), which funds tribes and tribal organizations. In addition, a provision within the PREP statute, called the Competitive Personal Responsibility Education Program (CPREP), enables community- and faith-based organizations within states and territories that do not directly seek PREP state grants to apply for funding through a competitive application process.

Similar to other programs highlighted in the State Profiles, the grants for the various PREP programs are awarded throughout the year, with several awarded in the final month of the fiscal year for use and implementation throughout the following year. SIECUS reports on funding amounts appropriated in FY 2018 and any programmatic activities that occurred during FY 2018 (October 1, 2017–September 30, 2018). It is important to remember, however, that reported programmatic activities for this period may have

utilized FY 2017 funds. Details on the state grants, PREIS, Tribal PREP, and CPREP are included below. Please see below for detailed information on the PREP grant data withheld by FYSB.

### **PREP Program at Risk of Misuse**

While PREP has not faced the same scrutiny as TPPP, the Trump administration is suspected of attempting to transform this evidence-based program into an additional funding stream for abstinence-only programs.

PREP grantee funding data from FYSB are public and have been successfully acquired by SIECUS for the past 15 years—working with both Republican and Democrat administrations—prior to the Trump administration. Yet, for the first time ever, FYSB has ignored SIECUS’ many requests for grantee funding data this year.

With a five-year reauthorization of PREP slated for early 2019, SIECUS remains highly concerned that the Trump administration, and its ideologically-driven political appointees, will pursue another opportunity to eliminate evidence-based programming in order to further increase abstinence-only funding.

### **Personal Responsibility Education Program (PREP) State-Grant Program**

The PREP state-grant program supports evidence-based programs that provide young people with medically accurate and age-appropriate information for the prevention of unintended pregnancy, HIV, and other STDs. Funded programs must discuss abstinence and contraception and place substantial emphasis on both. Programs must also address at least three of the following adulthood preparation subjects: healthy relationships, positive adolescent development, financial literacy, parent-child communication skills, education and employment skills, and healthy life skills. PREP programs target young people who are experiencing homelessness, are in foster care, are living in rural areas or areas with high rates of adolescent births, and are from minority groups.

### **Personal Responsibility Education Innovative Strategies (PREIS)**

PREIS funds local entities through a competitive grant program to support research and demonstration programs to develop, replicate, refine, and test innovative models for preventing unintended teen pregnancy, HIV, and other STDs among young people ages 10-19.

### **Tribal Personal Responsibility Education Program (Tribal PREP)**

Tribal PREP supports the development and implementation of pregnancy-, HIV-, and other STD-prevention programs among native young people within tribes and tribal communities. Tribal PREP programs are designed to honor tribal needs, traditions, and cultures.

### **Competitive Personal Responsibility Education Program (CPREP)**

CPREP grants support evidence-based programs that provide young people with medically accurate and age-appropriate information for the prevention of unintended pregnancy, HIV, and other STDs. Only organizations and institutions in states and territories that did not apply for PREP state grants are eligible to submit competitive applications for CPREP grants.

### **TITLE V SEXUAL RISK AVOIDANCE EDUCATION GRANT PROGRAM**

The Title V Sexual Risk Avoidance Education Grant program (“Title V SRAE”), previously called the Title V AOUM program,<sup>48</sup> is administered by FYSB, within ACF of HHS, and was authorized at \$75 million for

FY 2018. This state-based program must exclusively promote that “the unambiguous and primary emphasis and context” for each topic required to be taught in the new A–F definition<sup>49</sup> of “education on sexual risk avoidance” is a “message to youth that normalizes the optimal health behavior of avoiding nonmarital sexual activity.” While grantees were required from FYs 1998–2017 to provide three state-raised dollars, or the equivalent in services, for every four federal dollars received, the state-match provision is no longer required. In FY 2018, FYSB withheld detailed information about Title V SRAE grantees and provided only the dollar amount awarded to each state.

Unlike TPPP and PREP, the Title V SRAE grant program was always intended to promote failed<sup>50</sup> abstinence-only programs, or so-called “Sexual Risk Avoidance” programs, rather than evidence-based sex education. However, what began as a tiny sliver of the federal budget has been funded at exponentially higher levels every year. As evidence-based programs like TPPP face continued threats of elimination, SRAE has seen a seven-fold increase in funding since its inception in 2012 (when it was known as the Competitive Abstinence Education program). The Trump administration claims that the government does not have funds to spend on adolescent sexual health. However, the numbers prove the baselessness of this claim: To date, more than \$2.2 *billion* have been wasted on failed AOUM programs like Title V SRAE.

- In FY 2018, the Arizona Department of Health Services received \$1,572,565 in federal Title V SRAE funding.<sup>51</sup>

### SEXUAL RISK AVOIDANCE EDUCATION (SRAE) PROGRAM

Administered by FYSB within ACF of HHS, the SRAE program—a rebranding of the Competitive Abstinence Education program—provides funding for public and private entities for programs that “teach young people to voluntarily refrain from non-marital sexual activity and prevent other youth risk behaviors.” These programs are also required by statute to “teach the benefits associated with self-regulation; success sequencing for poverty prevention; healthy relationships; goal setting and resisting sexual coercion; dating violence; and other youth risk behaviors, such as underage drinking or illicit drug use, without normalizing teen sexual activity.” In FY 2018, \$25 million was appropriated for the SRAE grant program, and \$11.9 million was awarded to 27 grantees in 15 states through a competitive application process.

- In FY 2018, there was one SRAE grantee in Arizona: Arizona Youth Partnership (\$440,317).<sup>52</sup>

ARIZONA YOUTH PARTNERSHIP (AZYP), \$440,317 (FY 2018)

The Arizona Youth Partnership (AZYP) was founded in 1990 by, according to the AZYP website, “a group of concerned Pima County citizens” who sought to expand services into rural areas of the county and has now expanded to serve the entire state. AZYP seeks to fight poverty and encourage youth and family self-sufficiency “through evidence-based prevention programs and community involvement.”<sup>53</sup> With its SRAE grant funds, AZYP will serve 3,250 Latino and Native American young people in schools and community-based settings each year using [Choosing the Best Series](#) and [Making a Difference!](#) curricula. At the time of publication, additional information on AZYP’s use of SRAE grant funds was unknown.

<sup>45</sup> Evidence-informed curricula are intended to educate youth, building knowledge and skills, while evidence-based programs and interventions are focused solely on reducing “negative” health outcomes.

<sup>46</sup> “Current Teen Pregnancy Prevention Program (TPP) Grantees,” Office of Adolescent Health, U.S. Department of Health and Human Services, <https://www.hhs.gov/ash/oah/grant-programs/teen-pregnancy-prevention-program-tpp/current-grantees/index.html>.

<sup>47</sup> “Teen Outreach Pregnancy Services,” Office of Adolescent Health, U.S. Department of Health and Human Services, <https://www.hhs.gov/ash/oah/grant-programs/teen-pregnancy-prevention-program-tpp/current-grantees/teen-outreach-pregnancy-services/index.html>.

<sup>48</sup> In the FY 2018 reauthorization, the “Title V State Abstinence Education Grant Program” was renamed the “Title V Sexual Risk Avoidance Education” (SRAE) program. The definition of the Title V program was changed to mandate that grantees adhere to a new A-F definition as opposed to the [old A-H definition](#) for Title V programs.

<sup>49</sup> 42 U.S.C. 710, Title V, Section 510 of the Social Security Act, the authorization for the Title V Sexual Risk Avoidance Education grant program, requires that “education on sexual risk avoidance” programs address each of the following topics: (A) the holistic individual and societal benefits associated with personal responsibility, self-regulation, goal setting, healthy decision-making, and a focus on the future;

(B) the advantage of refraining from nonmarital sexual activity in order to improve the future prospects and physical and emotional health of youth;

(C) the increased likelihood of avoiding poverty when youth attain self-sufficiency and emotional maturity before engaging in sexual activity;

(D) the foundational components of healthy relationships and their impact on the formation of healthy marriages and safe and stable families;

(E) how other youth risk behaviors, such as drug and alcohol usage, increase the risk for teen sex; and

(F) how to resist and avoid, and receive help regarding, sexual coercion and dating violence, recognizing that, even with consent, teen sex remains a youth risk behavior.

Regarding contraception, Title V programs must also ensure that “students understand that contraception offers physical risk reduction, but not risk elimination” and that “the education does not include demonstrations, simulations, or distribution of contraceptive devices.”
